

Sustainability Report

Rovaniemen kaupunki

Aktia

Overview

The ESG data produced by Morningstar/Sustainalytics describes responsibility in three areas: environmental, social and governance. This is an objective view drawn up by Morningstar on the responsibility themes and their impacts and links to the investee companies. Morningstar's methodology is available on the company's website and documentation.

Morningstar ESG Risk Rating

The risk rating, i.e. the globes, describes Morningstar's assessment of the funds' ESG risks and how well ESG risks have been considered in the funds' investees. The more globes, the smaller the ESG risks of the fund in relation to the fund's reference group. ESG risks may form financially significant risks. The risk rating is calculated for a fund when Morningstar data coverage for the fund is at least 67%.

Low Carbon Designation

An indication whether the portfolio holdings are in general alignment with the transition to a low-carbon economy. In order to receive the Low Carbon Designation, the fund must have a Historical Carbon Risk Score below 10 and a Historical Fossil Fuel Percentage of Covered Portfolio Involved of less than 7%.

ESG Risks

Sustainability Score

Sustainability Score Explained

Exposure to Environmental, Social and Governance factors, that could pose a financially material risk. The ESG Risk Score is rendered on a 0-100 scale, where lower scores are better, using an asset-weighted average of all covered securities. Morningstar determines whether each eligible portfolio holding can be classified under the corporate or sovereign framework.

- 0-10 Negligible Risk
- 10-20 Low Risk
- 20-30 Medium Risk
- 30-40 High Risk
- 40+ Extreme Risk

ESG Risks Portfolio vs Benchmark

	Portfolio	Benchmark
Sustainability Score	17,0	17,8
Environmental Risk Score	3,8	5,1
Social Risk Score	7,4	8,2
Governance Risk Score	4,2	4,4
Unallocated Risk Score	1,6	0,0

ESG Risk Score Distribution % of AUM

	Portfolio	Benchmark
Negligible ESG Risk	8,6	5,8
Low ESG Risk	65,6	64,9
Medium ESG Risk	23,1	25,5
High ESG Risk	2,6	3,3
Severe ESG Risk	0,2	0,3

Controversies

Controversy Distribution % of AUM

No Controversies	16,1
Low Controversies	16,3
Moderate Controversies	53,2
Significant Controversies	11,4
High Controversies	3,0
Severe Controversies	0,1

This table shows the distribution of a portfolio's Assets Under Management (AUM) across six controversy categories: No, Low, Moderate, Significant, High, and Severe. These categories follow Sustainalytics' controversy assessment framework, which rates incidents on a severity scale from 0 (none) to 5 (most severe).

"No controversies" means no recorded incidents with environmental or social impact or material business risk. In contrast, "Severe controversies" reflect the most serious cases, involving significant harm to the environment or society and posing major business risks.

UN Global Compact Principles & OECD Guidelines for Multinational Enterprises

	Portfolio	Benchmark
Violations % of Portfolio Involved	0,3	0,1

The percentage of the portfolio that is exposed to companies that are found to violate the principles of the Global Compact (UNGC) and/or the OECD Guidelines for Multinational Enterprises. These frameworks set internationally recognized standards for responsible business conduct, covering areas such as human rights, labor rights, environmental protection, and anti-corruption. A violation typically reflects serious shortcomings in corporate practices, such as involvement in human rights abuses, environmental damage, or unethical business behavior.

Low Carbon Risk	73,21
Medium Carbon Risk	15,32
High Carbon Risk	0,55
Severe Carbon Risk	0,00

Carbon Risk Breakdown Explained

The carbon risk score measures the degree to which a company's economic value is at risk driven by the transition to a low-carbon economy. Specifically, the Carbon Risk Rating measures a company's unmanaged exposure to carbon risk.

0 Negligible Risk
0.01-9.99 Low Risk
10-29.99 Medium Risk
30-49.99 High Risk
50+ Severe Risk

Weighted Average Carbon Intensity Scope 1 and 2 in USD Terms Time Series

Portfolio Carbon Intensity is the asset-weighted average for the portfolio of the underlying holdings' carbon intensity and is derived for carbon intensity scope 1 and 2. Carbon intensity for a company represents the volume of carbon emissions per million dollars of revenue, computed as follows: Total Emissions (tonnes of CO₂e)/Revenue (millions USD). For a portfolio, carbon intensity represents the carbon efficiency of its investments, where a lower value indicates a lower carbon intensity and greater carbon efficiency.
