Carbon Metrics

Low Carbon Designation

**Low
Carbon**

Morningstar carbon metrics are asset-weighted portfolio calculations based on Sustainalytics' company Carbon Risk Rating. To receive the Morningstar® Low Carbon Designation™, a fund must have a 12-month average Portfolio Carbon Risk Score below 10 and a 12-month average Fossil Fuel Involvement of less than 7% of assets. This signal helps investors easily identify funds that are well-positioned to transition to a low-carbon economy.

Carbon Risk Breakdown Explained

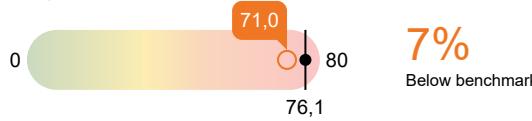

The carbon risk score measures the degree to which a company's economic value is at risk driven by the transition to a low-carbon economy. Specifically, the Carbon Risk Rating measures a company's unmanaged exposure to carbon risk.

- 0-10 Negligible Risk
- 10-20 Low Risk
- 20-30 Medium Risk
- 30-40 High Risk
- 40+ Severe Risk

Carbon Intensity

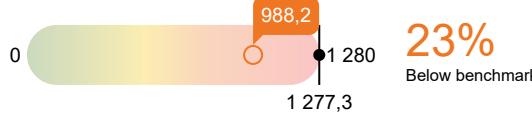

Scope 1+2/Scope 1+2+3 is the asset-weighted average for the portfolio of the underlying holdings' Carbon Intensity scope 1, 2 and 3 (in USD terms). The average only includes holdings for which company Carbon Intensity Scope 1, 2 and 3 (in USD terms) is available. Carbon intensity for a company represents the volume of carbon emissions per million dollars of revenue, computed as follows: Total Emissions Scope 1, 2 and 3 (metric tons of CO₂) / Revenue (Mil USD). For a portfolio, carbon intensity represents the average carbon efficiency of its investments, in metric tons of CO₂. A lower value indicates lower intensity, and greater carbon efficiency.
